Revolutionary Web-Based Application

With COMET you can:

- View extensive amounts of crude assay data - all from one application
- Quickly find crudes with user-defined criteria from a large assay database
- Add your own assay data, with drag-and-drop feature
- Use powerful search facilities
- Display assay reports and graphs
- Compare crudes side-by-side for any desired qualities
- Electronically export assays in Excel or Word format
- Re-cut and blend crudes using technology from the world renowned crude assay management system, H/CAMS
- Quickly determine the netback value of crudes or blends, for a variety of refinery configurations (simple to complex), using black box LP optimization

Links directly to CIMS

- CIMS (Crude Information Management System) - a web based application maintained by **PetroTech Intel** (PTI) which monitors new field discoveries and quality changes in existing crude grades (www.PetroTechIntel.com)
- Provides information on 2000+ crude fields (load port, location maps, API gravity trends, production and export rates, and other valuable information)
